

Better arguments. Better *decisions*.

Syllogylabs is a Canadian company developing AI tools for structured argument, thoughtful evaluation and human review.

OUR FIRST PLATFORM: SHADOW JUDGE

Shadow Judge provides structured AI debate adjudication and feedback, supported by a human judge review process. The platform is being tested internally at Vancouver Debate Academy through individual practice and an in-house tournament. The focus is ballot quality, the human review queue, annotations and operational reliability.

THREE DIRECTIONS

01

Shadow Judge

Debate practice, academies and tournaments.

● Internal pilot

02

Public education

Exploring broader access to reasoning and communication practice.

● Exploration

03

Syllogylabs Enterprise

Exploring structured challenge and evidence-linked evaluation for business decisions.

● Exploration

CANADIAN DIRECTION

Our long-term objective is Canadian-controlled processing and storage across the full pipeline.

This is a development objective, not a claim that sovereignty requirements or compliance certifications have already been met.

PARTNERSHIPS

We are interested in conversations with educators, institutions and partners about bounded pilots, useful evaluation and responsible deployment.
